

3 PLATE SINGLE TANK ASSEMBLY (NO BASE)

*3 Large Plate A

*3 Small Plate B

Step 1:

Lay a Large Plate "A" on a flat surface and insert 3 Small plates "B" in slot 1/4/7 such that they all are equidistant. Make sure all Small plugs are on top.

Step 2:

Flip the Tank Module 90 degree on its side; make sure you see all Large Plugs aligned, then position the Large Plate "A" and lock it in with a light rubber mallet. Repeat the same procedure for other side.

Step 3:

Important Note:

Please note when assembled modules are placed in the excavation, 715mm & 400mm can be the length or width, visa versa.

420mm always has to be the height.

This way you will always see a complete top LARGE plate, and no frames.
